- * Only 4 residents may ride on the van at one time.
- * All seats, headrests, seatbelts, handrails, and lift handles will be cleaned.

MOSQUITO PREVENTION

CDE needs your help to prevent Mosquitoes this season which starts this month. Mosquito and Vector Control came to our property last season and were very concerned about all the plants with trays.

We all need to do our part.

They highly suggest when watering your plants, to dump and drain the water out of trays immediately EVERY time. This will help reduce the mosquito population significantly.

What to look for:

- Small, black mosquitoes with white stripes
- Mosquitoes that are active and bite during the day - even indoors!
- Immature mosquitoes (larvae and pupae) swimming in stagnant water.

What you need to know:

Mosquito breeding source elimination and bite prevention is the only way to prevent the spread of mosquitoes.

Mosquito Life Cycle

The invasive, black-and-white mosquitoes can lay their eggs individually along the waterline of any container. This reduces with the effectiveness of “dump and drain!”

These mosquitoes can live and complete their life cycle either indoors or outdoors. Eggs are laid along the waterline of any water-holding container such as flower vases, plant saucers, buckets, used tires, and even plants that hold water like bamboo or bromeliads. Eggs can remain alive for years, and hatch into larvae when conditions are right.

Charming Spring

By Patricia L. Cisco

Published: March 2018

Reminiscent melodies
serenade the morning breeze.

Feathered creatures nest with care
in cherry blossoms pink and fair.

Perfumed scent of roses flow.
Tiny blades of green grass grow.

Misty showers soak the earth,
glorious colors come to birth.

Gathering clouds come and go,
rain, sun, and vibrant bow.

Dainty petals, fancy flair,
dancing in the warm, sweet air.

Violets, yellows, purest white,
graceful, gentle, welcomed sight.

Thank you, oh sweet lovely Spring,
patiently waiting the charms you bring!

about Spring.**
